Cantonese

Deploy Predictive Analytics

Master the data mechanics and statistical logic required to pivot from historical reporting to predictive modeling, utilizing proven frameworks like an employee retention "flight risk" scorecard.

Practically apply advanced AI tools (such as ChatGPT, Copilot, and Gemini) to automate tedious data validation, clean unstructured HR datasets, and instantly generate complex calculation syntax.

Build GenAI-Assisted Dashboards

Utilize generative design applications and rapid prototyping tools to drastically accelerate the creation of professional user interface (UI) mockups and layout structures.

Bridge HR with Finance

Align human capital metrics directly with macro business goals, corporate staff budgeting, and product accounting to translate workforce data into clear financial impacts.

Architect Dynamic KPI Frameworks

Translate raw, disparate workforce data into visually compelling, actionable executive scorecards designed to secure direct buy-in from the C-suite, Board of Directors, and Remuneration Committee.

Please bring your laptop to the course

Member	**HK$2,600**
